

## **EEAC's Comp Auditor® II Update 6.0.1 Now Available**

EEAC is pleased to announce that an update is now available for download by licensed users of Comp Auditor® II. This update corrects a minor bug in the program, and includes the following enhancements:

- Users now will be able to import mixed data (numeric and variable characters) in a column from Microsoft Excel® without the non-numeric data being given a null value.
- The file specification process now identifies possibly incorrect data in the user-specified gender and race columns. The user will receive an “alert” message when the data are inconsistent with what the program expects.

The update is available for download to all licensed users of Comp Auditor® II by clicking on <http://www.eeac.org/ca/update.asp>, or by clicking on the Help button in the Comp Auditor® II software. A zip file will be downloaded to your computer with the Comp Auditor® II update program. Click on the update application to install.
