

Technical Note for Excel 2007 Users of EEAC's IRA Workbook II

In order for EEAC's IRA Workbook II to function properly, users must enable Microsoft® Excel's macros before (or upon) opening the workbook. To do so in Microsoft® Excel 2007, users should take the following steps:

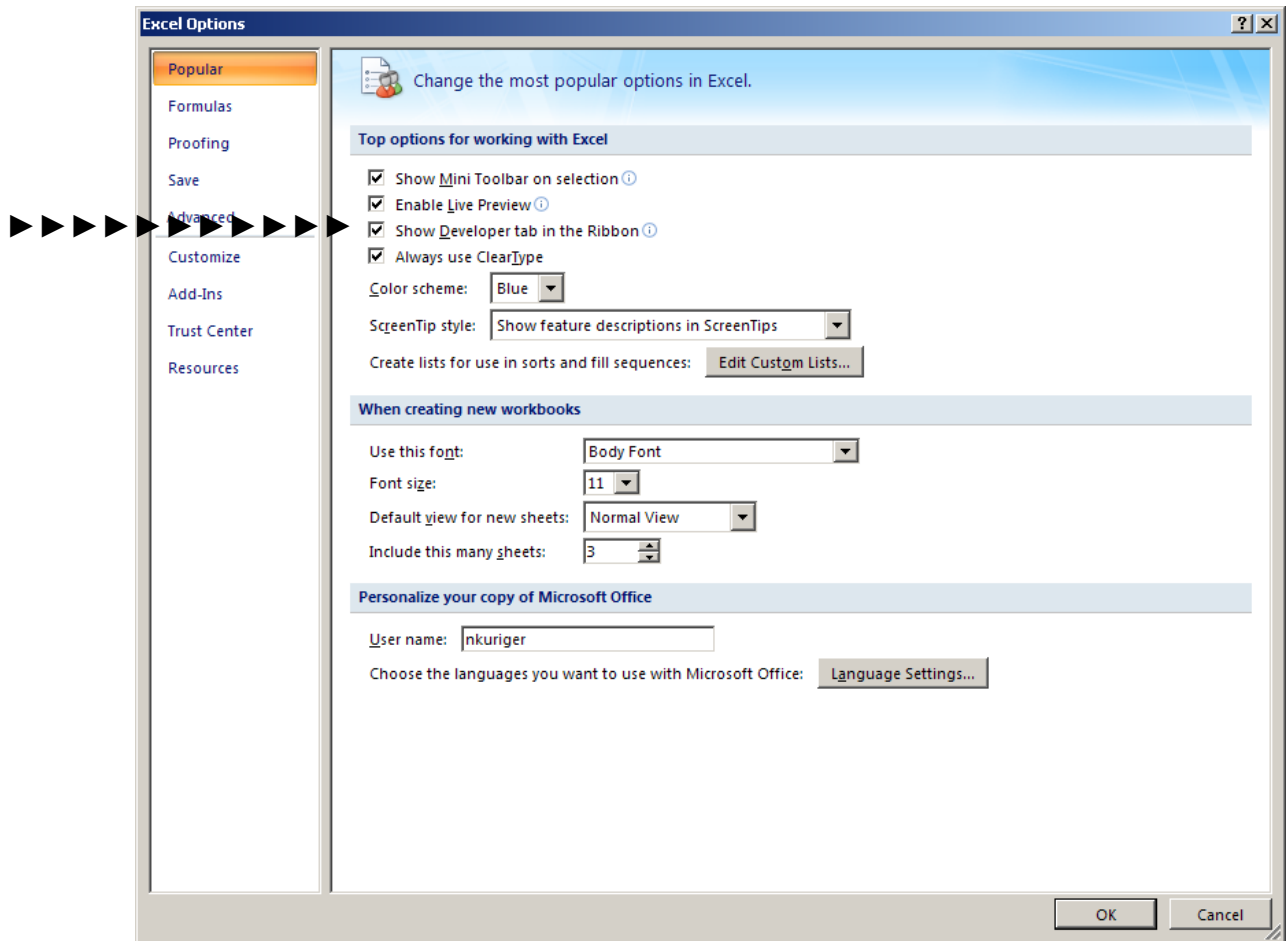

Step 1: Upon opening the Workbook, Excel 2007 should give the user a "Security Warning" indicating that active content has been disabled (see below). If the "Security Warning" does not appear, please proceed to Step 3.

Step 2: Click on the "Options" button to the right of the Security Warning. When the dialogue box appears, select "Enable this content" and click on OK (see below).

Step 3: If the Security Warning described in Step 1 does not appear, Excel 2007 users will need to enable the “Developer” tab. This is done by clicking on the “Office” button, and then selecting Excel Options (see below).

Step 4: From this screen, click on the “Show Developer tab in the Ribbon” checkbox and click on OK. The Developer tab will appear at the top of the worksheet (see below).

Step 5: Click on the Developer tab and then select “Macro Security”.

Step 6: In the Trust Center dialog box, select “Enable all macros” and click OK.

Excel 2007's macro features should now be enabled and EEAC's IRA Workbook II should function properly.
